PREFACE

American business men are beginning to realize that the exchange of knowledge and experience is revolutionizing the methods of modern commercial business life more than any other one factor since the beginning of time; that every man can make a profitable exchange by giving his knowledge, ideas and experience for that of others. For while he gives the knowledge of one man, and that without taking anything away from himself, he receives in return the ideas and information of many. The business principle that "that exchange is best which gives both parties the greatest possible profit" has been found as successful in the exchange of knowledge and experience as of commodities.

This modern tendency has led the writer to offer to the American business public his knowledge, ideas and experience, which he does herewith in the form of a volume entitled "MARKER'S INTEREST & BOND TABLES." It is the purpose of the author, through this volume, to simplify and expedite the work of the American business man in that particular sphere of the business world in which the swift and accurate computing of interest, either simple or compound, on both the 360-day and 365-day basis, the interest yielding capacity of bonds and stocks, the precise number of days between two dates, the exact maturity of obligations, etc., form prime essentials.

The author well knows that there are numerous books of interest tables on the market, some of them meritorious, others incomplete and unsatisfactory, but he sincerely believes that this volume will supply a long-felt want because of its absolute accuracy, its simplicity, its completeness, and the fact that it will save the user much time and nervous energy. It is the ardent hope of the author that the contents of this volume may be of sure and exact worth to every business man, banker, bank teller, bookkeeper, clerk, and all other branches of business activity where it may find usage.

THE AUTHOR.

DIRECTIONS

Accuracy, Simplicity and Speed have been combined in the compilation of this interest manual, and this combination should make it a valuable desk-partner and aid to every man in the commercial world, no matter what position he may hold. Accuracy has been obtained and is guaranteed because of the fact that the computations herein contained have been checked and re-checked by several different parties and finally verified by a Burroughs Adding Machine. Simplicity and Speed will be found in evidence because of the fact that the interest on any amount for any length of time at any rate is to be found on *ONE* page and in *ONE* column, thus eliminating the great inconvenience, loss of time, and probability of error which inevitably results from turning to several pages and switching from column to column as one is forced to do in most similar publications.

The computing of interest on any amount for any length of time at any rate will be found to be a very simple matter if the following directions be observed. The absolutely correct figures are there; all you have to do is to move the decimal point either to the right or left according to the number of figures in the amount on which interest is to be computed, the units, tens, hundreds, thousands, etc., each to be figured separately and totaled. The book figures are computed on the tens basis and the decimal point is to be moved one place to the right for each figure to the left of the tens, and one place to the left for each figure to the right of the tens. This may seem somewhat complicated at first reading but will be found to be very simple after observing the example to follow. In computing the interest on any amount containing but one figure ($1 to $9 inclusive) move decimal point one place to the left; on any amount containing two figures ($10 to $99 inclusive) take book figures; on any amount containing three figures ($100 to $999 inclusive) move decimal point one place to the right; on any amount containing four figures ($1000 to $9999 inclusive) move decimal point two places to the right, etc. For example, if the interest on $7645.00 for 147 days at 7% is to be computed, turn to the 147th day (page 37) and under column headed 7% the following results will be obtained:

DIRECTIONS—*Continued*

AMOUNT		INTEREST
$7000	move decimal point 2 places to RIGHT.....	$197.34
600	move decimal point 1 place to RIGHT.....	16.92
40	take book figures	1.13
5	move decimal point 1 place to LEFT.....	.14
$7645	.....	$215.53

The interest on $7645.00 for 147 days at 7% is $215.53.

ABSOLUTELY NO CHANCE FOR ERRORS.

The computations of interest are not limited to the rates which head the several columns. ¼%, ½%, 2%, 3½%, 4½%, etc., may be just as easily and swiftly computed as follows: To find the interest at ½%, compute at 5% and move decimal point one place to LEFT; to find the interest at ¼%, compute at 5%, move decimal point one place to LEFT and divide by 2; to find the interest at 2%, compute at 4% and take ½ of the result; to find the interest at 3½%, compute at 7% and take ½ of the result; to find the interest at 4½%, compute at 5% and deduct one-tenth (½% being one-tenth of 5%) from the result; or, compute at 5%, move decimal point one place to the left in the result and deduct.

For example, the interest on a given amount for a given length of time at 5% equals.....$5.83
By moving decimal point one place to the left which is equal to one-tenth, or..... .58

and deducting, the result is.....$5.25
or the interest at 4½%.

With just a little practice the user will become so thoroughly familiar with the method and proficient in his computations that the practicability of this interest manual will be fully established, and that the idea behind its publication—the computing of interest at the greatest possible speed consistent with absolute accuracy and simplicity—has been realized.

EXAMPLE—To find the number of days between October 11th, 1912 and March 4th, 1913: The figures under the eleventh day of October are 284, those under the fourth day of the March following are 428. Subtract the first from the second—i. e., 284 from 428, equal 144, the number of days between the two dates.

EXAMPLE—To find the maturity of a note dated August 7th due in 167 days: The seventh of August being the 219th day, this added to 167 days equals 386 or January 21st, the date the note matures.

The above table applies to ordinary years only, and for leap year one day must be deducted after February 28th.
